

TRAINER EDITION · INTERNAL USE

SUL Bix Day-to-Day User Training Guide

A walk-through of every everyday process in BIX: who uses it, how it works, what happens after you click, and what to do — and not do — on the live system.

PRODUCT

SUL Bix · Utility Admin

AUDIENCE

Staff, partners, and trainers

DATE

September 2026 · v1.21

How to use this guide

This is the script you can hold while you train. Each process is written in the same shape so you can demonstrate, then let the trainee repeat.

Before the room

- Confirm each trainee's **group** in Settings → Users (Sales, Support, Billing, and so on). They will not see the same menus.
- Prepare one test apartment and one test shop that are safe to change.
- Have a cancelled apartment ready if you will show "new tenant after cancel".
- Log in as the trainee's role, not only as Administrator. Admin sees everything and hides the real experience.

During the session

- Open the live screen, then read the process card: Who → When → Steps → Outcome → Do / Don't.
- Ask the trainee to say out loud which connected system will change (BIX, TISP, Zoho, OLT) before they click.
- Never practise Cancel, Wipe, Refund, or Suspend on a real paying customer.
- If a menu item is missing, it is almost always a permission — not a broken screen.

Suggested session shape

Block	Focus	Who stays in the room
45 min	What BIX is, login, roles, statuses, finding a customer	Everyone
75 min	Create customer, leads, installations, reminders	Sales, Support, Installations, Technicians
60 min	Upgrade, pause, resume, move, convert type	Support, Sales, Network Operations
45 min	Suspend, cancel, new tenant — demo only	Network Operations, Administrators, Support leads
60 min	Billing, payments, reports	Finance, Billing, Management
30 min	Partner view-only dashboards	Partners, Management
20 min	Golden rules recap and Q&A	Everyone

Split into two half-days if the group is mixed. Partners and technicians do not need the finance block.

Contents

1. What BIX is and how the pieces fit
2. Signing in and staying signed in
3. Roles, groups, and who uses which screen
4. Finding your way around
5. Customer statuses
6. Process catalogue
 1. Access and home
 2. Find, create, and edit customers

3. Package, billing, and location changes
 4. Pause, resume, suspend, and cancel
 5. Leads, communication, and reminders
 6. Installations and network
 7. Packages, buildings, apartments, agencies, campaigns
 8. Money: transactions, billing, reports
 9. Settings, users, IPTV, activity
-
7. Daily playbooks by role
 8. Quick reference matrix
 9. Golden rules

What BIX is and how the pieces fit

SUL Bix is the staff application for day-to-day work: customers, packages, buildings, collections, and field jobs. Customers do not log in here. They pay by M-Pesa / USSD; BIX is where the team records, bills, and restores service.

One action in BIX can update several systems. Train people to think in this chain before they click.

System	What it is in plain language	What staff should expect
BIX (local)	The customer record you see: name, unit, package, status	Source of truth for identity, apartment, and subscription status
TISP	The ISP engine that allows or stops internet	Package, account number, due date, PPPoE. Due date = today means service stops
Zoho Books	Invoices and recurring billing	C2B bills the person. B2B bills the agency. Recurring invoices keep monthly billing going
OLT / ONU	The physical fibre port in the building	Pause / suspend / cancel can switch the ONU off if it is linked
M-Pesa	How most customers pay	Paybill or STK. A successful payment can restore a paused or suspended line

Two billing types — never mix them up

	C2B — invoice to customer	B2B — invoice to agency
Who is billed	The resident / shop owner	The agency that manages the house
Zoho contact	Personal contact + personal recurring invoice	Agency contact. The house is a line on the agency
Customer number	POP C2B code, e.g. ET-401A or AZE-TGA-401A	POP B2B code, e.g. ETB-401A or AZEB-TGA-401A
To change type	Use Convert to C2B / B2B. Do not try to change type on Edit.	

Apartments and shops

Both live in the same building and POP. Apartments use a unit number (e.g. 4G). Shops use a location code (e.g. SH01 / S18) and a business name. Packages are priced as apartment or shop — customers only see matching prices.

Trainer tip. Draw the four boxes (BIX, TISP, Zoho, OLT) on a whiteboard. After every demo, ask: “Which boxes just changed?”

Signing in and staying signed in

PROCESS 01

Everyone

Sign in

When: Start of shift, or after the session expired.

1. Open BIX at **/admin** (production URL as issued by IT).
2. Enter work email and password.
3. If this is the first login after an admin created the account, you **must set a full password** before the app opens.
4. Land on Home. The dashboard you see depends on your group (finance, support, partner, or executive).

How it works. BIX checks your role and group permissions. Administrators get every module. Users only get what their groups (and any extra grants) allow. The left menu hides what you cannot use; the API also blocks it.

OUTCOME

You are in. Sidebar shows only your modules. Your email and role appear at the bottom of the sidebar.

DO

Use your own account. Sign out on shared PCs. Refresh the page after an admin changes your groups so new menus appear.

DON'T

Share passwords. Work in someone else's logged-in session. Assume a missing button is a bug.

PROCESS 02

Everyone

Reset a forgotten password

When: Locked out, forgotten password, or too many failed sign-ins.

1. On the login page click **Can't access your account?**
2. Enter your work email → **Send reset link.**
3. Open the email (link lasts about 60 minutes) and set a new password.
4. Completing the reset also unlocks a lockout from failed attempts.

How it works. If the email exists, BIX sends a time-limited link. Admins can also send a reset link, unlock the account, or set a temporary password from Settings → Users. IT inbox: it@sulsolutions.biz if mail never arrives.

OUTCOME

New password; previous sessions are invalidated. You sign in again.

DO

Use the self-serve link first. Tell IT if the mail is delayed.

DON'T

Ask a colleague to share their login while you wait. Reuse an old weak password.

Sign out

When: End of shift, leaving a shared desk, or switching accounts.

1. Bottom of the left sidebar → **Sign out**.

OUTCOME

Session ends. Next visit needs a password.

DO

Sign out on tablets and shared PCs.

DON'T

Leave BIX open on a customer-facing counter.

Accounts have a concurrent session limit. Signing in on a new device can kick the oldest session off. If you suddenly see "session expired", just sign in again — do not create a second account.

Roles, groups, and who uses which screen

There are only two **system roles**. Day-to-day access comes from **groups**.

System role	Meaning
Administrator	Every module, automatically. Groups cannot reduce this. Use sparingly.
User	Can sign in and see Home. Everything else is added by groups and individual grants.

Prefer **one primary group** per person. A second group always adds access; it never subtracts. Dangerous actions (cancel, wipe, refund, campaign create) are **not** in any preset — grant them one by one or use Administrator.

Preset groups — match the job, not the job title

Group	Typical job	Home	Can	Cannot (by default)
Sales	Acquisition	Support home	Create/edit customers, leads, packages view, buildings/apartments view, campaigns view, reminders, installations view	Financials, cancel, disconnect, building create, agencies
Support	Help desk	Support home	Create/edit customers, pause/resume, OLT view, leads, communication, installations assign/update, reminders	Cancel, disconnect, agencies, building create
Installations	Onboarding coordinators	Support home	Create/edit customers, OLT, apartments occupancy, assign/update jobs, reminders	Building/POP create, cancel, financials
Technician	Field tech	Support home	View customers/buildings/apartments, update installation jobs, update reminders	Create customers, assign jobs, billing
Network Operations	NOC	Support home	Edit customers, disconnect, pause, OLT, edit buildings/POPs, installations	Cancel, finance, leads
Billing	Collections	Finance home	View financials, allocate, billing actions, communicate, reports, reminders	Refund, billing sync, customer create
Finance	Accounts / CFO ops	Finance home	Full billing ops including sync, analytics, reports + schedules, agencies view, export	Refund (grant separately), Settings, customer create
Management	Exec / PM	Executive home	Read finance, customers, reports, analytics, agencies, campaigns, leads, installations	Create/edit customers, allocate, cancel
Partner — Internet	Internet partner	Partner home	View all customers, dashboard, reports	Any create/edit, financials, buildings
Partner — DSTV	DSTV partner	Partner home	View DSTV subscribers only , dashboard, reports	Internet-only customers, any edit
Partner — Investor	Investor	Partner / reports-	View all customers, reports, analytics	Any create/edit

Group	Typical job	Home	Can	Cannot (by default)
		first		

Create-customer companion rule. Creating a customer also needs view access to buildings, apartments, and packages. That is why Sales, Support, and Installations have those view rights — not so they can redesign the network.

Finding your way around

Left sidebar (desktop) or menu / bottom nav (phone). Items appear only if you have permission.

Menu	What it is for	Typical groups
Dashboard	Today's picture: KPIs, charts, live activity	All signed-in users
Customers	Search, open, create, and act on subscribers	Sales, Support, Finance, NOC, Partners (view)
Leads	Prospects, public signups, WhatsApp/email inboxes	Sales, Support
Communication	Customer WhatsApp and email channels	Sales, Support
Packages	Product catalogue and building prices	Sales (view), Admin / config editors
Buildings	Properties, POP codes, OLTs, IP rules	NOC (edit), others view
Agencies	B2B partners and agency invoices	Finance, Admin
Campaigns	First-month discounts and referrals	View: Sales/Finance; create: Admin only
Apartments	Units, shops, occupancy history	Support, Installations, NOC
Installations	Field jobs for signup and unit moves	Installations, Technician, Support
Reminders	Action items, tags, checklists	Most operational groups
Activity	Audit of customer and user changes	Granted users / Admin
IPTV	Startlyx test console (not day-to-day billing)	Granted users / Admin
Transactions	M-Pesa, Zoho, TISP payment history	Finance, Billing, Management
Billing	Reconciliation, gaps, manual review	Finance, Billing
Analytics	BI dashboards and forecasts	Finance, Management, Investor
Reports	Downloadable operational and finance packs	Finance, Management, Partners
Settings	Users, webhooks, sync, logs, IPTV connection	Admin; slices for finance/ops

Opening a customer

1. Customers → search by name, number, phone, apartment, or building.
2. Click the row to expand: **Status, Package, Connection, Contact, Invoices, Payments**.
3. The : menu on the row (or in the panel) is where almost every service action lives.

Invoices and Payments tabs hide if the user cannot see financials (e.g. Sales, Partners).

Trainer tip. On a phone, train the search bar and the : menu first. Almost every daily task starts there.

Customer statuses — say these words exactly

Status	Meaning	Internet	Billing
Active	Live on TISP and on Books — using the service	On	Running
Suspended	On Books, not live on TISP (includes “not yet on TISP”)	Off	Continues
Paused	Away on purpose — customer asked for a break	Off	Next invoice deferred; unused days credited
Cancelled	Churned — apartment/shop released for a new occupant	Off	Stopped; overdue invoices voided where possible

Paused and Suspended keep the customer **status = active** in the database. That is why the : service menu still appears. Cancelled customers drop out of counts and most reports unless you turn on “show cancelled”.

Pause allowance (per paid period)

Payment frequency	Maximum pause
Monthly	1 week
Quarterly	2 weeks
Yearly	1 month

Days can be used in shorter stays. Remaining balance shows on the customer until the allowance is exhausted. A new allowance starts after the next payment.

Home dashboards

PROCESS 04

Use Home for your role

Everyone

When: First thing after login. Pick today’s work from the numbers, not from memory.

- 1. Open **Dashboard**.
- 2. Read the cards that match your job (see below).
- 3. Use charts and activity as a jump-off: click through to customers, billing, or installations.

If you are...	You see	Use it to
Admin / Finance / Billing	Finance home: revenue, collections, package mix, live activity	Spot failed payments and collection risk
Support / Sales / Tech / NOC / Installations	Support home: subscriber health, installations, recent customer events	See who was created, paused, moved, assigned
Management	Executive home: outstanding, AR aging, churn, revenue trend	Weekly pulse, not data entry
Internet / DSTV / Investor partner	Partner home: collections, movement, package mix (DSTV filtered)	View only — no edits

OUTCOME

A role-specific picture of the business. No data is changed by looking.

DO

Start every shift on Home. Partners: treat this as a report, not a work queue.

DON'T

Train partners on create/edit screens they cannot use.
Don't use Admin home as the Support demo.

Find, create, and edit customers

PROCESS 05

Sales

Support

Finance

NOC

Partners

Find and open a customer

When: Any question about a person, unit, decoder, or bill.

1. Customers → type at least 2 characters (name, customer number, phone, unit, building).
2. Optional filters: status, building, category, C2B/B2B, apartment/shop, show cancelled.
3. Click the row. Read Status first, then Package, then Connection.
4. DSTV partners only see DSTV subscribers — internet-only names will not appear.

OUTCOME

The live record. No change until you use : or Edit.

DO

Confirm customer number and unit before any action.
Check status: Active vs Paused vs Suspended vs Cancelled.

DON'T

Act on the first similar name. Don't use Edit to change package or type.

PROCESS 06

Sales

Support

Installations

Create an apartment customer

When: New resident, verified lead, or replacement tenant on a free unit.

1. Customers → **New customer** (or convert from a Lead).
2. **Premise:** Apartment. Pick **Building**, then unit (e.g. 4G). Put the block in Block if the building uses blocks. Wait until the form says the unit is available.
3. Schedule installation (date/time, auto or named technician) if a field visit is needed.
4. **Package & billing:** frequency (monthly / quarterly / yearly / custom) → category → plan. Add extra TVs (KES 500 each after the first) and extra decoders (KES 3,500 each) when the package includes TV. Capture DSTV IUC/serial if required.
5. Fill contact, billing address, **C2B or B2B** (agency required for B2B), VAT exempt if applicable.
6. **Network:** IP (if the building requires it) and PPPoE password (generated or typed). DSTV-only packages skip TISP network fields.
7. Read the submit summary → Create. Customer is emailed a welcome / signup invoice when Zoho onboarding succeeds.

How it works. BIX stores the person and generates the customer number from POP code + building + unit. TISP gets an account (or an update if the unit's old account still exists after a cancel). Zoho gets a new contact and signup invoice (C2B) or a house on the agency (B2B). Campaign first-month discounts apply at onboard only. Decoder fees are never discounted. An installation job is created when you scheduled one.

OUTCOME

Active customer with a number, package, and (usually) a Zoho invoice. TISP due date follows signup rules (typically 7 days C2B / 30 days B2B if an initial invoice is raised). Job appears under Installations.

DO

Verify phone and email. Use the live unit number. Pick apartment-priced packages for apartments. Capture decoder serial when DSTV is on the package.

DON'T

Create on an occupied unit. Don't put block+unit in one field. Don't pick a shop package for an apartment. Don't skip agency on B2B.

PROCESS 07

Sales

Support

Installations

Create a shop customer

When: A business in the same building as apartments.

1. New customer → Premise **Shop**.
2. Building → **Business name** → **Location in building** (e.g. S18). Confirm "Location is available".
3. Choose a **shop** package (building prices are apartment or shop).
4. Complete billing, type, and network as for apartments.

OUTCOME

Customer number uses the shop location segment. Same TISP/Zoho rules as apartments.

DO

Use the posted shop code, not a nickname.

DON'T

Reuse an apartment unit number for a shop.

PROCESS 08

Sales Support

Convert a lead / public signup into a customer

When: Public form or WhatsApp prospect is verified and ready to install.

1. Leads → open the person. Public signups land as **Interested — pending conversion**.
2. Update status (contacted / qualified) and message them from the lead if needed.
3. Convert → New customer form opens with name, phone, building, unit, and package pre-filled.
4. Complete missing network / billing fields → Create. Lead becomes **Converted** and links to the customer.

OUTCOME

A real customer. The lead is no longer in the prospect queue.

DO

Verify the unit is still free. Confirm package and frequency with the customer before convert.

DON'T

Convert twice — BIX will tell you a customer already exists. Don't treat "Interested" as already billed.

PROCESS 09

Sales Support Installations NOC

Edit customer details

When: Wrong phone/email, IP, PPPoE, DSTV serial, VAT, or agency — not a package upgrade.

1. Customer : → **Edit customer details**.
2. Building and unit are locked on edit. To change unit, use **Move apartment / Move unit**.
3. Customer type is locked. To change C2B/B2B, use **Convert**.
4. Package fields are locked unless the user has local package-correction permission (rare, dangerous).
Normal staff use Upgrade / Downgrade / Update frequency.
5. Save. Active customers are pushed to TISP. C2B Zoho contact is updated; B2B personal Zoho is skipped.

OUTCOME

Corrected record. TISP updated if still active. OLT unchanged (link ONU separately).

DO

Fix contact and decoder serial here. Use dedicated actions for package, move, and type.

DON'T

Use Edit to "quietly" change package price. Don't change type here.

PROCESS 10

Finance Admin Import: Support/Sales if granted

Export or import customers

When: Spreadsheet for accounts, or a controlled bulk load.

1. Export: Customers → export button → choose columns, Excel/CSV, current page or all filtered rows.
2. Import: download the template first, fill it, upload, watch the progress dialog. Failed rows stay in the log.

OUTCOME

A file, or new/updated rows from the template.

DO

Filter before export. Import only with a reviewed file.

DON'T

Email full customer exports to personal Gmail. Don't re-import a file that already succeeded.

Package, billing, and location changes

All of these start from the customer : menu and only show for **active** customers (including Paused / Suspended).

PROCESS 11

Upgrade package

Sales

Support

When: Customer wants a higher-priced plan now, optionally with a new frequency.

1. : → **Upgrade package**.
2. Pick the new plan (and frequency if they asked). Read the quote: remaining days on the current period and the top-up amount.
3. Pay by **Zoho invoice** or **M-Pesa STK**. If they already paid enough, the upgrade can apply immediately.
4. If STK: confirm the phone. Package changes when payment is confirmed — not when the push is sent.
5. A pending upgrade can be cancelled from the same dialog if they abandon payment.

How it works. Quote uses the current frequency first. TISP package updates only when the upgrade actually applies. Zoho raises a top-up invoice (C2B contact or B2B agency). C2B recurring lines refresh on apply. OLT does not change. Cancelling a pending upgrade does not void an already-created Zoho invoice — follow up manually if needed.

OUTCOME

Immediate: new package on BIX + TISP, top-up invoice. Pending: old package stays until money lands.

DO

Read the quote aloud. Confirm STK phone. Wait for payment before promising speed.

DON'T

Upgrade and downgrade in the same breath. Don't tell them they are on the new plan while status is pending.

PROCESS 12

Downgrade package

Sales

Support

When: Customer wants a cheaper plan. Any pending upgrade is cancelled first.

1. : → **Downgrade package** → pick the lower plan → confirm the credit (if unused value remains).

How it works. Local package changes immediately. TISP package updates. Zoho credit note when credit > 0 (if Zoho errors, the local change still stands — chase finance). C2B recurring refreshes.

OUTCOME

Lower package live. Possible Zoho credit. Pending upgrade gone.

DO

Explain that unused days may become a credit, not cash in hand.

DON'T

Promise a cash refund from a downgrade. Refunds are a separate, dangerous permission.

Update payment frequency

When: Same speed, different billing cycle (monthly ↔ quarterly ↔ yearly ↔ custom).

1. : → **Update frequency** → pick the cycle. BIX switches to the matching Mbps product and price.
2. Blocked if a pending upgrade exists — finish or cancel that first.

How it works. No proration (unlike up/downgrade). TISP updates. C2B Zoho recurring refreshes. B2B skips personal Zoho. TISP's own billing cycle stays monthly even if BIX frequency changes.

OUTCOME

New frequency and matching package price on the record.

DO

Confirm the new invoice amount before saving.

DON'T

Use this to change Mbps. That's upgrade/downgrade.

PROCESS 14

Sales

Support

Installations

Move apartment or shop unit

When: Same building, new unit. (Different building = cancel + new signup, unless your ops policy says otherwise.)

1. : → **Move apartment** or **Move unit**.
2. Enter the new unit. Wait for occupancy check (must be free).
3. Enter a new IP if the building requires it.
4. Schedule installation and assign a technician if a visit is needed.
5. Confirm. Customer number changes (e.g. ET-401A → ET-502B).

How it works. Apartment history closes the old unit and opens the new. TISP migrates: old account released, new account inserted, due date kept. C2B Zoho company name / recurring reference updated. B2B Zoho skip. ONU index/serial cleared so pause cannot kill the old port — **relink ONU after the move**.

OUTCOME

New number, new unit, old unit free. Installation job if scheduled. ONU needs relink.

DO

Tell the customer their account number changed. Relink OLT/ONU. Book the technician.

DON'T

Move onto an occupied unit. Don't leave ONU on the old port.

PROCESS 15

Support

Sales

Admin

Convert C2B ↔ B2B

When: House moves from personal billing to an agency (or back). Agency is required for B2B.

1. : → **Convert to B2B** or **Convert to C2B**.
2. Pick the agency when going to B2B. Confirm the new number (C2B/B2B code swap, unit stays).

How it works. Local type, agency, and number change. TISP migrates accounts and keeps the due date (never "today"). C2B→B2B: stop personal recurring, inactivate personal contact, raise agency signup invoice + rebuild agency recurring. B2B→C2B: rebuild agency recurring without this house, create personal contact + recurring + new invoice. If local convert works but TISP fails, Refresh Status can migrate from the alternate number.

OUTCOME

New customer number and billing party. Internet due date preserved.

DO

Agree the agency in writing first. Check TISP after convert.

DON'T

Use Edit to change type. Don't convert to B2B without an agency.

Create on TISP

When: Active internet customer with no TISP due date, or TISP sync failed/pending. Hidden for DSTV-only.

1. : → **Create on TISP** (only if the menu shows it).
2. Confirm success on Status / Connection. If it fails, read the error and retry after fixing IP/PPPoE.

OUTCOME

TISP account exists; customer can be connected when due date is in the future.

DO

Use this when onboarding skipped TISP. Check Connection tab afterwards.

DON'T

Force it on DSTV-only customers. Don't create duplicates by guessing.

Pause, resume, suspend, and cancel

Choose the right stop. Pause = customer away, billing deferred. Suspend = non-payment / force stop, billing continues. Cancel = they left, unit is free. Payment can restore Pause and Suspend. Cancel cannot be undone — onboard a new tenant instead.

PROCESS 17

Support

NOC

Pause service (away)

When: Customer is travelling or the unit is empty for a short, agreed stay. Only while status is Active. Blocked when pause days are exhausted.

1. : → **Pause service (away)**. The label shows remaining days if some were already used.
2. Start date, number of days (1 through remaining), reason (required).
3. Read the credit preview (return date, days credited, next due) → Pause service.

How it works. Subscription becomes Paused (customer stays active). TISP due date = today (internet stops now, even if start date is in the future). Matching Zoho recurring is deferred so the next invoice is after pause end plus credited days. Linked ONU is deactivated. Unused away days credit onto the next subscription when they pay. Customer is emailed unless mail is skipped.

OUTCOME

Internet off. Status Paused. Allowance reduced. Next bill shifted. Credit shown on Status and Package tabs.

DO

Use pause for travel/renovation. Record a clear reason. Tell them remaining days.

DON'T

Pause for non-payment (use Suspend). Don't pause after days are exhausted. Don't promise a longer break than the allowance.

PROCESS 18

Support

NOC

Resume service

When: Customer came back early, or you paused by mistake. Menu shows only while Paused.

1. : → **Resume service** → confirm. Remaining pause days stay available this period.

How it works. Restores internet now (TISP + OLT when linked). Unused pause days remain until the next payment starts a new allowance. Payment while paused can also reconnect automatically.

OUTCOME

Status Active (or restored on TISP). Remaining days still shown.

DO

Resume when they are back in the house. Confirm TISP if the toast warns.

DON'T

Resume a Suspended customer from this item — they need payment or a NOC reconnect path, not Pause-resume.

Suspend on TISP

When: Force-stop internet (typically non-payment) without touching Zoho.

1. : → **Suspend on TISP** → confirm "Stops TISP access today. Zoho billing is unchanged."

How it works. Subscription = Suspended. TISP due = today. ONU off if linked. Zoho invoices and recurring continue. Reconnect is payment-driven (M-Pesa or allocated Zoho payment → TISP due restored, ONU on).

OUTCOME

Internet off, bills still going. Status Suspended.

DO

Use for collections enforcement. Tell the customer that paying restores service.

DON'T

Suspend people who are travelling (use Pause). Don't expect Zoho to stop. Support should not have this button unless granted.

PROCESS 20

Administrator or individually granted

Cancel and release apartment / shop

When: Tenant left for good. This is the normal offboarding. Not in any preset group.

1. : → **Cancel & release apartment** (or shop).
2. Reason required. Capture ONU collected date and DSTV decoder collected date when asked.
3. Confirm. Screen returns immediately; TISP and Zoho finish in the background — check Activity if you need proof.

How it works. Local: cancelled, history closed, number archived to {number}-CXL-{id}, IP/PPPoE/DSTV cleared so the live number can be reused. TISP due = cancel day (async). Zoho: void overdue invoices; C2B stop recurring, rename company, mark inactive; B2B void only this house and stop matching recurring (agency stays). ONU deactivate async. Partially paid Zoho invoices may fail to void — finance follow-up.

OUTCOME

Unit is free for a new tenant immediately. Old person remains as cancelled history.

DO

Collect ONU and decoder dates. Prefer Cancel over Wipe. Wait for background Zoho/TISP before promising “fully cleared”.

DON'T

Cancel to “fix” a wrong package. Don't wipe an active customer. Don't reuse the cancelled row — create a new customer.

PROCESS 21

Sales

Support

Installations

New tenant on the same unit after cancel

When: H302 is free because the previous person was cancelled.

1. Confirm the previous customer is Cancelled and the unit shows available.
2. Create a new customer on that unit (Process 06). Do not “reactivate” the old row.

How it works. New person gets the live number. TISP prefers UPDATE of the existing account (new name/phone/package/due) — not a duplicate insert. Zoho creates a **new** contact and signup invoice; old invoices are not inherited. If a leftover Zoho contact still owns the live name, it is retired to the CXL form. If signup wrongly linked the old contact, use **Retry billing onboarding** on the customer.

OUTCOME

Fresh tenant, same unit number, clean Zoho, updated TISP.

DO

Always Cancel → Create. Retry billing onboarding if old invoices appear on the new person.

DON'T

Edit the cancelled customer back to active. Don't skip Cancel “to keep the number”.

PROCESS 22

Administrator only (customers.delete)

Wipe local records

When: Almost never. Only after Cancel, to remove a cancelled row from BIX.

1. Show cancelled → : → **Wipe local records**. API rejects wipe while still active.

How it works. Hard-deletes the local row and related BIX history. TISP, Zoho, and OLT are **not** cleaned. Orphans can remain if Cancel did not finish.

OUTCOME

Gone from BIX. Integrations may still have the account.

DO

Cancel first and wait for background jobs.

DON'T

Wipe to offboard. Don't demo this in training on anything but a disposable test row.

PROCESS 23

Everyone who can view customers

Apartment / occupancy history

When: Dispute over who lived in a unit, or when the decoder was collected.

1. Customer : → **Apartment history / Occupancy history**, or Apartments → unit → history tab.

OUTCOME

Read-only timeline. No TISP/Zoho/OLT calls.

DO

Use this before creating a new tenant.

DON'T

Treat history as a way to undo Cancel.

Leads, communication, and reminders

PROCESS 24

Work the leads pipeline

Sales

Support

When: New demand from website, WhatsApp, email, or a walk-in you typed in.

1. Leads → All leads / WhatsApp / Email.
2. Create lead (manual) or open a public signup.
3. Statuses: New → Interested → Contacted → Qualified → Converted or Closed.
4. Send WhatsApp or email from the lead. Add notes.
5. Convert when ready (Process 08).

OUTCOME

A tracked prospect, then a customer if converted.

DO

Close junk leads. Keep one conversation thread per person.

DON'T

Create a customer without converting the lead — you will duplicate people.

PROCESS 25

Message a customer (Communication)

Sales

Support

Billing (collections messages)

When: Welcome, follow-up, or collections copy that is not a lead chat.

1. Communication → WhatsApp or Email tab.
2. Pick the customer thread → send. Billing users also send collection messages from Billing actions when permitted.

OUTCOME

Message in the channel history. Customer may reply in the same thread.

DO

Use the official channel so history stays on the record.

DON'T

Send personal WhatsApp from a private phone for official billing threats.

Create and close a reminder

When: Follow-up: call back, collect decoder, check payment, visit site.

1. From a customer : → **Create reminder**, or Reminders → New.
2. Type, due date, priority, tag people, optional checklist.
3. Bell / Reminders list → open → update status (in progress / completed / cancelled) and tick steps.
4. Filter Mine vs Overdue vs all.

OUTCOME

Tagged users are notified. Work is visible instead of living in chat.

DO

Tag the owner. Close completed items the same day.

DON'T

Create reminders instead of doing the real action (pause, allocate, etc.).

Installations and network

PROCESS 27

Installations

Support

Technician

NOC

Run an installation job

When: New signup or apartment move booked a visit. Kinds: Onboarding or Apartment move.

1. Installations → filter by status, kind, date, search.
2. Coordinator: **Assign** technician (or leave auto), set/reschedule date and time.
3. Technician: mark **In progress** on arrival → **Completed** when live, with notes. Cancel only with a reason.
4. If internet still down after complete: check customer Connection and ONU link — completing the job does not by itself activate TISP.

OUTCOME

Job status updated. Customer record unchanged except through other actions (OLT link, create on TISP).

DO

Technicians update their own jobs. Coordinators assign.
Capture notes (ONU serial, issues).

DON'T

Mark complete if the line is not passing traffic.
Technicians should not reassign jobs (no assign permission).

PROCESS 28

Support

NOC

Installations

Link OLT / ONU on a customer

When: After install or after a unit move (ONU was cleared on move).

1. Open customer → Connection tab → link building OLT and ONU index / serial as trained by NOC.
2. Refresh ONU status if the panel provides it.

How it works. Pause, suspend, and cancel deactivate this ONU. Payment-driven reconnect activates it. If unlinked, TISP still stops/starts but the physical port may stay as-is.

OUTCOME

Physical port follows billing/service actions.

DO

Relink after every move. Verify the index with the building plan.

DON'T

Copy the previous tenant's ONU index without checking the closet.

Packages, buildings, apartments, agencies, campaigns

PROCESS 29

[Sales \(view\)](#)[Admin / config editors](#)

View or maintain packages

When: Check a price before signup, or (config editors) add a plan for a building.

1. Packages → search by plan, category, premise (apartment/shop), frequency.
2. Expand a product for Mbps, extra bandwidth, TV flags, building prices.
3. Create/edit only if you have packages.create / packages.edit. Building prices are apartment or shop — customers only see matching ones.

OUTCOME

Catalogue used by New customer, upgrade, and reports.

DO

Sales: look up, don't invent a price. Editors: keep apartment vs shop prices separate.

DON'T

Delete a package that still has subscribers. Don't train Sales to create packages.

PROCESS 30

[NOC \(edit\)](#)[Sales/Support \(view\)](#)

Buildings and POPs

When: New property, new OLT, or wrong C2B/B2B code / IP prefix.

1. Buildings → open a building (name, POP, C2B code, B2B code, IP setup).
2. NOC: create/edit building and POP OLT records. Codes drive customer numbers — change them with extreme care.

OUTCOME

Signup and numbering use the new property data.

DO

Let NOC own codes and IP rules. Sales only selects the building on the form.

DON'T

Let Sales create buildings. Don't change a live POP code without a migration plan.

PROCESS 31

Installations

Support

NOC

Apartments occupancy**When:** Is this unit free? Who was here last?

1. Apartments → filter building → open unit. Overview + occupancy ledger.
2. Installations group can maintain occupancy data; others typically view.

OUTCOME

Clear occupied vs free before signup or move.

DO

Check here when the new-customer form says occupied.

DON'T

Force a second active tenant on one unit.

PROCESS 32

Admin

Finance (view)

Agencies (B2B)**When:** A managing agent bills for several houses.

1. Agencies → create name, contact, phone, email.
2. Open the agency for houses, invoices, and recurring.
3. Attach customers via Convert to B2B or at signup (Process 06 / 15).

OUTCOME

One Zoho contact for the agent; houses listed underneath.

DO

Create the agency before converting houses.

DON'T

Put personal C2B invoices on an agency contact by editing type.

PROCESS 33

Sales (view)

Finance (view)

Create/edit: Administrator

Campaigns**When:** First-month discount or referral window. Discount applies at onboard only.

1. Campaigns → view dates, discount, applications, status.
2. Admin: create, pause, resume, edit dates. Decoder fees are never discounted.

OUTCOME

Live campaign is offered on New customer when dates match.

DO

Sales: check Campaigns before quoting a promo price.

DON'T

Manually subtract a promo on a random invoice. Don't apply campaign to upgrades.

Money: transactions, billing, reports

PROCESS 34

FinanceBillingManagement

Look up a payment (Transactions)

When: “I paid but still disconnected.”

1. Transactions → filter All / M-Pesa / Zoho / TISP, Success / Failed, date, customer, STK vs paybill.
2. Expand the row for reference, phone, amount, and linked customer.

OUTCOME

Proof of payment or a failed STK. Read-only unless you continue in Billing.

DO

Search M-Pesa receipt / phone first. Then open the customer Payments tab.

DON'T

Reconnect from Transactions. Allocate unmatched money in Billing.

PROCESS 35

FinanceBilling

Billing reconciliation overview

When: Daily collections huddle. TISP vs Zoho mismatches.

1. Billing → home: outstanding, customers with issues, revenue at risk, expected this month.
2. Finance (sync permission): run **Sync** if the picture looks stale.
3. Open **Billing Gaps** or **Manual Review**.

Gap	Plain meaning	Typical next step
Free service (overdue/unpaid)	Connected without payment	Collect or suspend (NOC)
Paid up, disconnected	Money in, line still off	Refresh status / wait for payment handler / check TISP
Not in Zoho Books	No Zoho link	Retry billing onboarding
Recurring invoice stopped	Monthly bill won't generate	Resume recurring (billing action)
Missing invoice	Should have a bill, doesn't	Finance follow-up
Disconnected, not invoiced	Off and also unbilled	Decide collect vs cancel
Skipped monthly payment	A cycle was skipped	Review + communicate
Manual review	Sync error	Verify, don't click blindly

OUTCOME

A work queue. Opening a row shows invoices, payments, audit.

DO

Work gaps every morning. Billing group allocates and messages; Finance runs sync.

DON'T

Give Billing the refund permission by default. Don't ignore Manual Review.

Allocate a payment and run billing actions

When: M-Pesa arrived without a match, or Zoho recurring stopped.

1. Open the customer from Billing Gaps / customer Invoices-Payments.
2. **Allocate payment** when an unallocated M-Pesa exists for that person.
3. **Resume recurring invoice** when the profile was stopped by mistake.
4. **Refresh status** after TISP/Zoho drift (also used after a failed C2B↔B2B migrate).
5. Send billing communications from permitted actions — keep the tone professional.

How it works. Allocating a payment for Paused/Suspended can restore TISP due date and activate ONU (payment-driven reconnect). Local subscription may return to Active per payment rules. Pause credit applies on the next subscription payment.

OUTCOME

Money sits on the right person; service may come back without a menu Resume.

DO

Match amount and phone. Confirm the customer number before allocate.

DON'T

Allocate to the wrong house because the name is similar. Don't refund from here without billing.refund.

PROCESS 37

Analytics

[Finance](#)[Management](#)[Investor](#)

When: Trends, forecasts, package mix — not a single ticket.

1. Analytics → open a section → export if you have analytics.export.

OUTCOME

Charts and tables. No customer is changed.

DO

Use with Reports for board packs.

DON'T

Take a screenshot of a stale filter and call it month-end.

PROCESS 38

Run and download reports

[Finance](#)[Management](#)[Partners](#)[Support \(view\)](#)

When: Weekly ops, month-end, partner pack, DSTV roster.

1. Reports → pick a family: Executive, Financial, Billing, Forecasting, Customer, Network, Audit.
2. Set date / month / year filters → Preview → Download (Excel/PDF where offered).
3. Star favourites. Finance can **schedule** email reports (reports.schedule).
4. Partners only see the catalogue allowed for their type; DSTV partners are scoped to DSTV subscribers.

OUTCOME

A file or on-screen preview. Schedules keep arriving until deleted.

DO

Preview before download. Use DSTV IUC roster for decoder partners.

DON'T

Send unfiltered customer reports outside the company.
Don't grant export to people who only needed view.

Settings, users, IPTV, activity

PROCESS 39

Administrator

Create a staff user and assign a group

When: New hire, role change, or partner access.

1. Settings → **Users & permissions** → Create user: name, job title, email, role (User unless they must be Administrator), groups, status.
2. Copy the generated temporary password or email it. They must set a full password on first login.
3. Optional: Permissions on that user to grant/deny one action (e.g. customers.cancel) without changing the group.
4. Groups tab edits the bundle for everyone in that group. Users should refresh BIX after a change.
5. When access is **gained**, they get an email listing new capabilities. Revokes do not email.

OUTCOME

The person can sign in with the right menus. Audit log stores the permission change.

DO

One primary group. Grant cancel/refund individually.
Disable leavers; don't share logins.

DON'T

Make everyone Administrator. Don't stack Sales+Finance "just in case". Administrators cannot be deactivated.

PROCESS 40

Granted users

Admin

Activity audit

When: "Who changed this package?" / training QA.

1. Activity → filter customer/user changes. Also use the live feed on finance/support home.

OUTCOME

An audit trail. Nothing is reversed from here.

DO

Use after a disputed cancel or convert.

DON'T

Treat Activity as a recycle bin.

PROCESS 41

IPTV test console

Not a daily billing tool

[iptv.view / operate](#)

When: Testing Startlyx: create a test subscriber, assign a package, inspect channels, disconnect/reconnect a test user.

1. IPTV → Create test / Channels / Packages / Users.
2. Connection URL and admin credentials live under Settings → IPTV (iptv.settings).
3. Disconnect cancels the active package; reconnect assigns it again.

OUTCOME

A Startlyx test user — not a BIX internet customer.

DO

Use obvious test usernames. Keep operate permission tight.

DON'T

Train sales to onboard fibre customers here. Don't point it at production Startlyx without approval.

PROCESS 42

Settings others may see

[Admin](#)

[Finance \(sync\)](#)

[Ops \(logs\)](#)

- **Webhooks** — M-Pesa STK/C2B callbacks, Zoho Books webhook (admin).
- **Communication** — Zoho Mail identity, customer email templates, WhatsApp Cloud API (admin).
- **Synchronization** — Zoho and other integration jobs (finance operators).
- **Logs** — API/integration errors; retry if permitted.
- **Versioning** — what shipped in BIX (this guide tracks 1.21).

DO

Leave webhooks and flags to IT/Admin.

DON'T

Toggle integration flags during a training demo on production.

Daily playbooks by role

Give each trainee only their playbook after the shared intro. Times are a guide, not a clock-in rule.

Sales

1. Home — new signups and leads activity.
2. Leads — reply WhatsApp/email, move status, convert verified people.
3. Customers — create apartment/shop, quote from Packages, apply live campaign only at onboard.
4. Upgrade/downgrade when they ask to change plan.
5. Reminders for call-backs. You do not see invoices; send money questions to Billing.

Support

1. Home — paused, new, moved, failed reconnects.
2. Find customer → confirm status before acting.
3. Edit contact/serial; pause/resume for travel; Create on TISP if missing; Communication for replies.
4. Assign/update installations; create reminders; link ONU with NOC guidance.
5. Escalate Suspend to NOC, Cancel to a granted user, money mismatches to Billing.

Technician

1. Installations — today's assigned jobs.
2. In progress → complete with notes. View customer/building for address only.
3. You do not create customers or assign work to others.

Installations coordinator

1. New signups and moves: schedule, assign technician, watch overdue jobs.
2. Apartments occupancy before booking a clash.
3. Create the customer if sales handed you a qualified lead.

Network Operations

1. Buildings/POPs/OLT accuracy.
2. Suspend for non-payment when Billing asks.
3. Pause only when Support is unavailable and the customer is away.
4. ONU links after installs and moves. Disconnect is yours; Cancel is not.

Billing / collections

1. Transactions — overnight M-Pesa.
2. Billing Gaps — allocate unmatched, resume recurring, send collection messages.
3. Reminders for promised-to-pay. You do not create customers or refund without a special grant.

Finance

1. Finance home + Billing sync.

2. Gaps, agencies, analytics, scheduled reports.
3. Investigate Manual Review. Refunds only if billing.refund was granted.

Management

1. Executive home and Reports (weekly / monthly packs).
2. Read-only on customers. Do not “quickly edit” a package on a call.

Partners (Internet / DSTV / Investor)

1. Dashboard and Reports (Investor: reports/analytics first).
2. DSTV: decoder subscribers only. View only — request changes via SUL staff.

Administrator

1. Users & groups, campaigns, dangerous grants, Settings, Versioning.
2. You can do every process — still follow Do/Don't. Prefer acting as a demo account for training.

Quick reference — who does which process

R = routine for that group. V = view / receive. G = only if individually granted. — = not their job.

[illegible]

Golden rules — pin this slide

1. **Status first.** Active, Paused, Suspended, and Cancelled need different actions.
2. **Right stop.** Pause = away. Suspend = non-payment. Cancel = left for good.
3. **Type and unit have dedicated actions.** Convert for C2B/B2B. Move for a new unit. Never Edit for those.
4. **Package changes go through Upgrade / Downgrade / Frequency** so Zoho and TISP stay aligned. Do not "correct the price" on Edit unless you have the dangerous local-correction grant.
5. **Cancel, then create** for a new tenant. Never revive a cancelled row.
6. **Payment restores Pause and Suspend.** You do not need a secret reconnect menu for someone who just paid.
7. **Relink ONU after a move.** The old port is cleared on purpose.
8. **Campaigns discount first month only.** Decoder fees are never discounted. Extra TV = KES 500 per extra set. Extra decoder = KES 3,500 each (signup decoder charge is separate).
9. **Missing menu = missing permission.** Ask an admin; don't borrow a login.
10. **Production is live money and live fibre.** Practise Cancel, Wipe, Refund, and Suspend only on agreed test accounts.

Connected-system cheat sheet

Action	BIX	TISP	Zoho	OLT
Create customer	New row	Insert or update	New contact + invoice (C2B) / agency house (B2B)	No (link later)
Edit details	Update	Update / migrate if number changed	C2B yes, B2B skip	No
Upgrade	Now or pending	When applied	Top-up invoice	No
Downgrade	Now	Update	Credit note if unused value	No
Move unit	New number	Migrate	C2B rename	Clear ONU
Convert type	New number	Migrate, keep due	Personal ↔ agency	No
Pause	Paused + credit	Due = today	Defer recurring	Off
Resume	Active	Restore	—	On
Suspend	Suspended	Due = today	Unchanged	Off
Cancel	Cancelled, number archived	Due = cancel day	Void overdue, stop recurring	Off
Payment while paused/suspended	May return Active	Due restored	Invoice paid	On

End of training check. Each person can: sign in; find a customer; explain Active vs Paused vs Suspended vs Cancelled; complete one process from their playbook without an admin account; name one thing they must never click.
